Project Bluecoats - Score Analysis And Visualization

Read Me

📌 **Purpose**

This notebook visualizes the performance progression of the Bluecoats Drum Corps across selected seasons, using caption-level DCI scoring data.

The report aims to identify scoring patterns, highlight major performance shifts, and compare caption scores (**General Effect**, **Visual**, and **Music**) across the seasons. 📊 **Data Source**

- "https://www.dci.org/scores/"
- Contains show-level scoring data for the Bluecoats, including overall scores and individual captions.

Collection & Cleaning DCI.org

- Initial Parsing
- Updating Latest Show Data
- Dataframes Displays

Visualization

- Preparation
- Total Score Graph
- Caption Score Graphs

Future Outlook...

Enjoy!

Author

Xi Cong

July 2025

```python
In [50]:  import requests
          from bs4 import BeautifulSoup
          import pandas as pd
          from pprint import pprint
          import importlib
```

Colletion and Cleaning DCI.org

Inital Parsing

Loops through all the shows documented on dci.org and writes the caption and sub caption scores into a csv file notated by date, location, corp name into a score_by_show&corp.csv

```python
In [51]:  # import find_show_info as fds
          # importlib.reload(fds)
          # fds.scrape_dci_recaps_selenium()
          # fds.build_show_score_list()
          # fds.build_show_score_df()
```

Updating Lastest Shows

Updates the lastest shows and write it to score_by_show.csv (name slightly different for differentiating purpose).

```python
In [ ]:  import find_show_info as fds
         importlib.reload(fds)
         fds.build_lastest_show_score_df()
```

Dataframes

Raw html

```
In [68]: df_raw = pd.read_csv("all_shows_score_recap.csv")
         pprint(df_raw.iloc[0, 0:3])
```

```

Bluecoats Music Caption Scores
Future Outlooks & Expansion Ideas

- Analyze judging trends by **matching judge names to caption scores**, identifying potential judge-specific scoring patterns or biases.
- Determine Bluecoats' **caption rankings in finals** across multiple years to reveal recurring **strengths and weaknesses**.
- If data permits, visualize operational season metrics such as:
  - **Spring training workload**: total and average rehearsal hours per day.
  - **Tour logistics**: total/average miles traveled, bus time, and housing/floor time.
  - **Tour rehearsal intensity**: rehearsal hours per day while on tour.
- Compare **caption score trajectories** of Bluecoats with peer corps (e.g., BD, Crown) for performance trend benchmarking.
- Analyze **score volatility** over a season to identify stability vs. inconsistency.
- Examine the **relationship between performance order and score**, especially at regionals and finals.
- Track **individual caption improvements** post-major show rewrites (if timestamped notes are available).
